### Working Gas in Underground Storage Data Released August 10, 2006 at 10:30 A.M., For the Week Ending August 4, 2006

Region	Stocks (Bcf) for August 4, 2006	Stocks (Bcf) for July 28, 2006	Implied Net Change (Bcf)	Year Ago Stocks (Bcf)
<b>East</b>	1,554	1,555	-1	1,359
<b>West</b>	380	373	7	368
<b>Producing</b>	829	847	-18	730
<b>Total Lower 48</b>	2,763	2,775	-12	2,457

Region	5-Year (2001-2005) Average Stocks (Bcf)	Difference from 5-Year Average (Percent)
<b>East</b>	1,342	15.8
<b>West</b>	334	13.8
<b>Producing</b>	712	16.4
<b>Total Lower 48</b>	2,389	15.7

#### Notes and Definitions

**Note:** This report tracks U.S. natural gas inventories held in underground storage facilities. The weekly stocks generally are the volumes of working gas as of the report date. Changes in reported stock levels reflect all events affecting working gas in storage, including injections, withdrawals, and reclassifications between base and working gas.

**Note:** The weekly storage estimates are based on a survey sample that does not include all companies that operate underground storage facilities. The sample was selected from the list of storage operators to achieve a target standard error of the estimate of working gas in storage which was no greater than 5 percent for each region. Based on a comparison of weekly estimates and monthly data from May 2002 through May 2006, estimated total working gas stocks have exhibited an average absolute error of 19 billion cubic feet, or 0.9 percent. For an expanded discussion of the relationship between the current and prior estimates, please see [Differences Between Monthly and Weekly Working Gas in Storage](#).

#### **Storage Highlights:**

Working gas in storage was 2,763 Bcf as of Friday, August 4, 2006, according to EIA estimates. This represents a net decline of 12 Bcf from the previous week. Stocks were 306 Bcf higher than last year at this time and 374 Bcf above the 5-year average of 2,389 Bcf. In the East Region,

stocks were 212 Bcf above the 5-year average following net withdrawals of 1 Bcf. Stocks in the Producing Region were 117 Bcf above the 5-year average of 712 Bcf after a net withdrawal of 18 Bcf. Stocks in the West Region were 46 Bcf above the 5-year average after a net addition of 7 Bcf. At 2,763 Bcf, total working gas is above the 5-year historical range.

**Working Gas in Underground Storage Compared with 5-Year Range**

Notes: A weekly record for March 8, 2002, was linearly interpolated between the derived weekly estimates that end March 1 and the initial estimate from the EIA-912 on March 15. The shaded area indicates the range between the historical minimum and maximum values for the weekly series from 2000 through 2004.
